PROJECTS

PEN

Github Repository

Aug 2017 - Sept 2017

- A Peer Exercise Network application for those who are able to set their goals but not punctual enough to finish their goals till the end.
- Backend was build using Nodejs with MongoDB as database and Angular 2 for the frontend.

DDLIT

Github Repository

April 2017 – May 2017

- A small project using Google's CSE V2 API to fetch direct download links for movies and TV shows. AngularJS framework was used for building a responsive layout for the landing page.
- Frontend is made using AngularJS which is sending requests to the Google's CSE V2 Api.

Home-Kart

Github Repository

March 2017 – April 2017

- A basic home rental web application similar to housing.com but on a miniature level which lists the houses according to user's choice.
- Made using Java Servlets and JDBC for backend and html, css, bootstrap for the front-end.

Profile-Mash

Github Repository

October 2016 – November 2016 2017

- Made in a hackathon at LNMIIT, it mashes the profile of an individual from different crowdsourcing marketplace websites and displays on a single platform.
